

## ADHD Evaluation and Treatment

Also known as	<ul style="list-style-type: none"><li>ADD</li><li>Attention Deficit Disorder</li><li>Attention Deficit Hyperactivity Disorder</li></ul>						
Description	<p>Attention deficit hyperactivity disorder (ADHD) is characterized by a persistent pattern of inattention and/or hyperactivity/impulsivity that occurs in academic, occupational, home or social settings. There is no single test to diagnose ADHD.</p> <p>A comprehensive evaluation is necessary to confirm a diagnosis, rule out other causes, and determine the presence or absence of coexisting condition. This includes a clinical assessment of the individual’s school/workplace, social and emotional functioning, and overall developmental level. Information should be gathered from parents, teachers, and the individual, as appropriate.</p> <p>Effective treatment in children and teens usually involves a multi-modal approach involving multiple interventions working together as part of a comprehensive treatment plan.</p>
