

## Canalith Repositioning

Also known as	<ul style="list-style-type: none"><li>Epley maneuver</li><li>Particle repositioning maneuver</li></ul>				
Description	Canalith repositioning can treat benign paroxysmal positional vertigo (BPPV), which causes dizziness when a person moves their head. The procedure includes head positions that move the canalith particles (otoconia) in the inner ear that cause the dizziness to a part of the ear where they won't (the utricle).
